GitHub Issues Info

See [About issues - GitHub Docs]() for more detailed information on how to use issues effectively.

Purpose:

You can create issues in your repository to plan, discuss, and track work. Issues are quick to create, flexible, and can be used in many ways. Issues can track bug reports, new features and ideas, and anything else you need to write down or discuss with your team, and you can use projects to plan and track the work for your team. You can also break your work down further by adding sub-issues and easily browse the full hierarchy of work to be done.

Integration with GitHub:

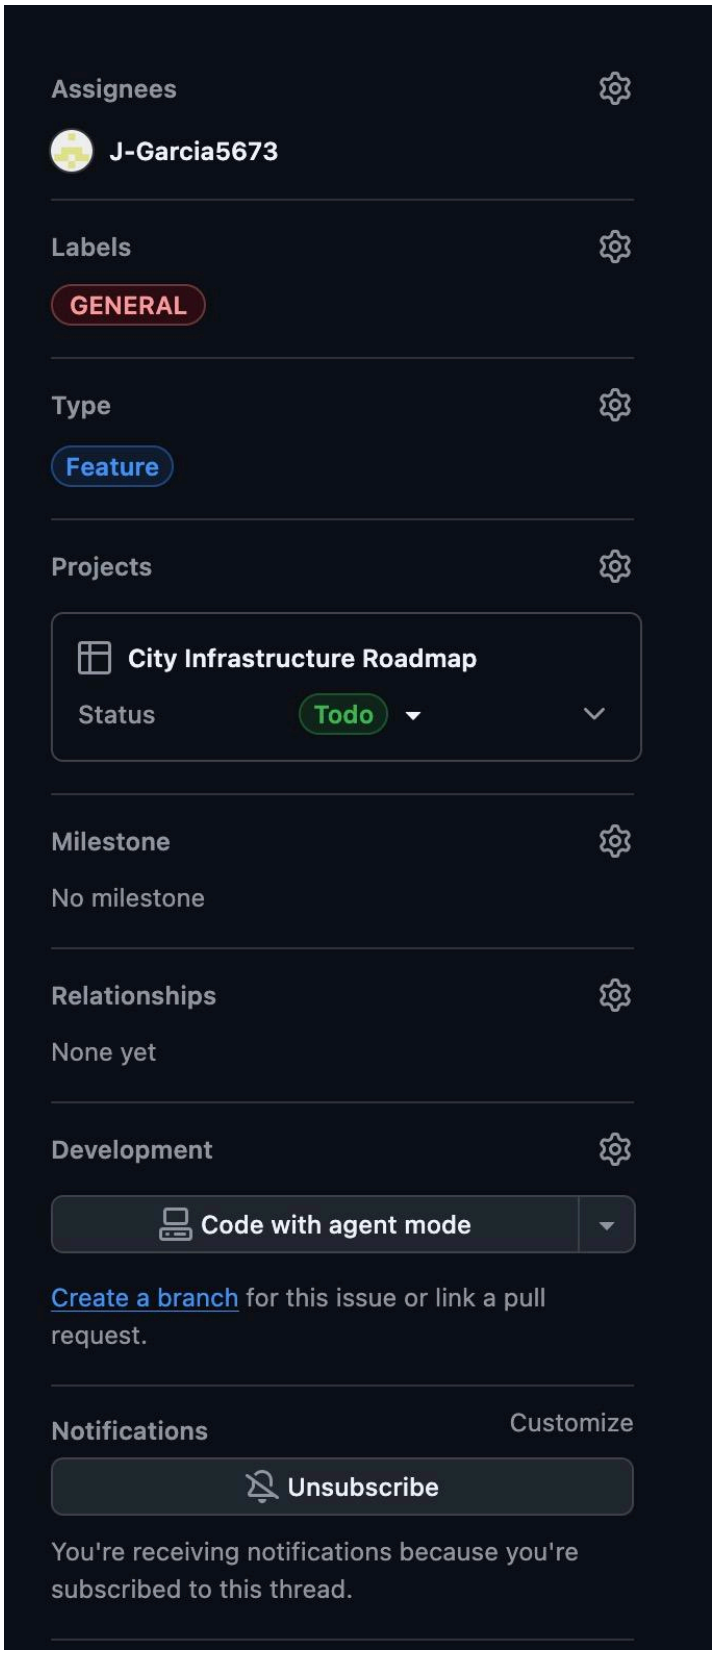
Issues integrate with your work all across GitHub. Mentioning an issue in another issue or pull request will create references between them and using keywords, like `fixes:`, in your pull requests will automatically close the associated issues.

Communication:

You can @mention collaborators who have access to your repository in an issue to draw their attention to a comment. To link related issues in the same repository, you can type # followed by part of the issue title and then clicking the issue that you want to link. To communicate responsibility, you can assign issues. If you find yourself frequently typing the same comment, you can use saved replies.

Refer to Issue 37 or detailed formatting standards for each issue

A Brief Example:



Assignees - team members responsible for the task

Labels - this should be the team for which this is belongs to

Type - what kind of task this is, see available options

Projects - all tasks should be under this specific project; DO NOT create a new project for your team

Notifications can be useful for team leads

This is a template issue
Issues allow for organized task management for each team
We can create to-do lists for planning
Layout ideas for clarity
etc.
Please ensure your issues include:
A DESCRIPTIVE title
Thorough descriptions
Appropriate tags
Link the issue to the "City Infrastructure Roadmap"
Appropriate assignees so everyone knows what is expected of them
These are just the basics, they are subject to change
Create sub-issue
